

Change the directory of command prompt to the folder where the java file **Lesson6NetworkingServer** is located. Give the integer 80 as the sever port number to upload the content of file index.html from the same directory.

```
C:\Users\hole1\Google Drive\LearnJava\JavaAdv\Lesson6Networking-Annie-Yen>java Lesson6NetworkingServer 80
```

Open another command prompt. Change the directory to the folder where java file **Lesson6NetworkingClient** is located. Give the string 10.1.1.12 and integer 80 as the server address and port number, respectively. The content of index.html file is returned by the server and displayed on the console.

```
C:\Users\hole1\Google Drive\LearnJava\JavaAdv\Lesson6Networking-Annie-Yen>java Lesson6NetworkingClient 10.1.1.12 80
<html>
<head><title>Java Networking</title></head>
<body>
<h1>Java Networking</h1>
</body>
</html>
```

When using web-browser to connect to the server (<http://10.1.1.12/80>), the browser displays the following, only the header Java Networking.

# Java Networking
